BALANCED PRESSURE THERMOSTATIC STEAM TRAPS TSS7

DESCRIPTION

The ADCAPure TSS7 all stainless steel thermostatic steam traps and air vents are specifically designed for use in hygienic applications such as reactors, CIP/SIP, autoclaves, sterilizers and distribution lines in clean and pure steam systems. Their small size makes them ideal for use with a wide variety of equipment.

MAIN FEATURES

Modulating discharge.
Excellent air discharge.
Simple and compact design.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS: Special designs on request.

USE: Saturated clean steam.

AVAILABLE
MODELS: TSS7 – clean steam trap.

SIZES: 1/2" to 1".

CONNECTIONS: Clamp ferrules ASME BPE.
Others on request.

PACKAGING: Assembling and packaging in a clean room
certified according to ISO 14644-1.
The product is end capped and sealed with
recyclable thermo-shrinkable plastic film, to
avoid contamination.

INSTALLATION: Vertical installation.
See IMI – Installation and maintenance
instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 10	Category
1/2" to 1"	SEP

LIMITING CONDITIONS *	
Maximum allowable pressure	10 bar
Maximum allowable temperature	177 °C
Maximum operating pressure	6 bar
Maximum operating temperature	165 °C

* Other limits on request. Maximum operating conditions may be limited by the steam trap end connections due to normative restrictions.

FLOW RATE CAPACITY (kg/h)

BALANCED PRESSURE THERMOSTATIC STEAM TRAPS TSS6

DESCRIPTION

The ADCAPure TSS6 all stainless steel thermostatic steam traps and air vents are specifically designed for use in hygienic applications such as reactors, CIP/SIP, autoclaves, sterilizers and distribution lines in clean and pure steam systems. Their small size makes them ideal for use with a wide variety of equipment.

MAIN FEATURES

Modulating discharge.
Excellent air discharge.
Simple and compact design.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS: Special designs on request.

USE: Saturated clean steam.

AVAILABLE
MODELS: TSS6 – clean steam trap.

SIZES: 1/2" to 1 1/2"; DN 08 to DN 25.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation.
See IMI – Installation and maintenance instructions.

BALANCED PRESSURE

THERMOSTATIC STEAM TRAPS

TSS6H

DESCRIPTION

The ADCAPure TSS6H all stainless steel thermostatic steam traps and air vents are specifically designed for use in hygienic applications such as reactors, CIP/SIP, autoclaves, sterilizers and distribution lines in clean and pure steam systems.

Their small size makes them ideal for use with a wide variety of equipment.

The thermostatic element is very sensitive and designed to open with a minimum sub-cooling of approximately 2 °C related to the saturated steam temperature.

MAIN FEATURES

Modulating discharge.

Excellent air discharge.

Simple and compact design.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.

External: ≤ 0,76 µm Ra – SF3.

Other surface conditions see TIS.GIA – General information ADCAPure.

Ultrasonic cleaning.

OPTIONS: Special designs on request.

USE: Saturated clean steam.

AVAILABLE MODELS: TSS6H – high capacity clean steam trap.

SIZES: 1/2" to 11/2".

CONNECTIONS: ASME BPE clamp ferrules.

Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.

The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation. See IMI – Installation and maintenance instructions.

BALANCED PRESSURE THERMOSTATIC STEAM TRAPS TSS6A

DESCRIPTION

The ADCAPure TSS6A all stainless steel thermostatic steam traps and air vents are specifically designed for use in hygienic applications such as reactors, CIP/SIP, autoclaves, sterilizers and distribution lines in clean and pure steam systems. Their small size makes them ideal for use with a wide variety of equipment.

MAIN FEATURES

Modulating discharge.
Excellent air discharge.
Simple and compact design.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS: Special designs on request.

USE: Saturated clean steam.

AVAILABLE MODELS:
TSS6A – horizontal inlet and outlet.
TSS6AI – horizontal inlet and vertical outlet.
TSS6AO – vertical inlet and horizontal outlet.

SIZES: 1/2" and 3/4".

CONNECTIONS: ASME BPE clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Installation with the safety clamp in the horizontal position. See IMI – Installation and maintenance instructions.

SANITARY PRESSURE REDUCING VALVES P130L

DESCRIPTION

The ADCAPure P130L is a series of low flow, direct acting, diaphragm sensing pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction materials and valve design. Specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Self relieving.
- Leakage line connection.
- Panel mounting.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Wall mounting.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction.

AVAILABLE MODELS: P130L.

SIZES: 1/2" to 3/4"; DN 08 to DN 20.

REGULATING RANGES: 0,2 to 1,5 bar; 0,3 to 3 bar; 2 to 8 bar.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation is recommended. See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
1/2" to 3/4" – DN 08 to 20	SEP

LIMITING CONDITIONS *	
Maximum allowable pressure	16 bar
Maximum upstream pressure	16 bar
Maximum downstream pressure	8 bar
Minimum downstream pressure	0,2 bar
Maximum operating temperature	150 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

SANITARY PRESSURE REDUCING VALVES P130K

DESCRIPTION

The ADCAPure P130K is a series of direct acting, diaphragm sensing pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction materials and valve design. Specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Self relieving.
- Leakage line connection.
- Panel mounting.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Wall mounting.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction.

AVAILABLE MODELS: P130K.

SIZES: 1/2" and 3/4"; DN 08 to DN 20.

REGULATING RANGES: 0,2 to 1,5 bar; 0,3 to 3 bar; 2 to 8 bar.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation is recommended. See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
1/2" and 3/4" – DN 08 to 20	SEP

LIMITING CONDITIONS *	
Maximum allowable pressure	16 bar
Maximum upstream pressure	16 bar
Maximum downstream pressure	8 bar
Minimum downstream pressure	0,2 bar
Maximum operating temperature	150 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

SANITARY PRESSURE REDUCING VALVES

P130J

DESCRIPTION

The ADCAPure P130J is a series of direct acting, diaphragm sensing, balanced plug pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction materials and valve design. Specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.
External: ≤ 0,76 µm Ra – SF3.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

Self relieving.
Leakage line connection.
Panel mounting.
Dome-loading.
Top cap (adjustment screw with cover).
Gauge connection on body.
Wall mounting.
Different soft sealings for liquids and gases.
Degreased for oxygen application.

USE:

Clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction.

AVAILABLE MODELS:

P130J.

SIZES:

1/2" to 1"; DN 08 to DN 25.

SANITARY PRESSURE REDUCING VALVES P130H

DESCRIPTION

The ADCAPure P130H is a series of direct acting, diaphragm sensing, balanced plug pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction materials and valve design. Specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE:

Clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction.

AVAILABLE MODELS:

P130H.

SIZES:

1"; DN 25.

REGULATING RANGES:

0,2 to 1,5 bar; 0,3 to 3 bar; 2 to 8 bar.

CONNECTIONS:

ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Horizontal installation is recommended. See IMI – Installation and maintenance instructions.

SANITARY PRESSURE REDUCING VALVES
P130G

DESCRIPTION

The ADCAPure P130G is a series of direct acting, diaphragm sensing, balanced plug pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction materials and valve design. Specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE:

Clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction.

AVAILABLE
MODELS:

P130G.

SIZES:

11/2"; DN 32 and DN 40.

REGULATING
RANGES:

0,2 to 1,5 bar; 0,3 to 3 bar; 2 to 8 bar.

CONNECTIONS:

ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Horizontal installation is recommended.
See IMI – Installation and maintenance instructions.

SANITARY PILOT OPERATED PRESSURE REDUCING VALVES P147

DESCRIPTION

The ADCAPure P147 is a series of pilot operated, diaphragm sensing pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases compatible with the construction materials and valve design. Specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Precise control of downstream pressure from 0,2 to 8 bar.
FDA / USP Class VI compliant seals.
Guided piston and valve stem.
Non-rising adjustment knob.
Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Dome-loading.
- Bottom cover with drain connection.
- Different soft sealings for liquids and gases.

USE:

Clean air, nitrogen, carbon dioxide, oxygen, argon and other gases compatible with the construction.
Clean steam (under special request).

AVAILABLE MODELS:

P147.

SIZES:

21/2" and 3"; DN 65 and DN 80.

REGULATING RANGES:

0,2 – 1,5 bar; 0,3 – 3 bar; 2 – 8 bar.

CONNECTIONS:

ASME BPE and DIN clamp ferrules. Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Horizontal installation. See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)

Special construction / Additional options															
Full description or additional codes have to be added in case of non-standard combination														E	

a) The loading control pressure can be up to a maximum of 1,2 bar above the required downstream pressure. b) Mandatory in case of dome-loading. c) Consult TIS.GIA – General information ADCAPure – for further details and other surface finish options.

SANITARY PRESSURE REDUCING VALVES P160G

DESCRIPTION

The ADCAPure P160G is a series of angle design direct acting diaphragm sensing pressure reducing valves. These regulators are designed for use with clean steam, compressed air, water and other gases or liquids compatible with the construction materials and valve design.

MAIN FEATURES

High capacities.
Top cap (adjustment screw with cover).
FDA / USP Class VI compliant seals.
Completely machined from bar stock material, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Gauge connection on body.
- Lock system, allows inline clean-in-place (CIP) and sterilization-in-place (SIP) operations.
- Lifting lugs to ease installation.
- Different soft sealings for liquids and gases.

USE:

Clean steam, compressed air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS:

P160G.

SIZES:

21/2" and 3".

REGULATING RANGES:

1 to 1,7 bar; 1,5 to 4 bar.

CONNECTIONS:

ASME BPE clamp ferrules.
Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Horizontal installation. Vertical inlet and horizontal outlet. See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 10	Category
21/2" and 3"	1 (CE Marked)

LIMITING CONDITIONS *	
Maximum allowable pressure	10 bar
Maximum upstream pressure	8 bar
Maximum downstream pressure	4 bar
Minimum downstream pressure **	1 bar
Maximum operating temperature ***	180 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

** For tight shut off, with adjustment spring relaxed, ensure a minimum downstream pressure of 0,2 bar.

*** See "Ordering Codes" table for restrictions.

SANITARY PRESSURE REDUCING VALVES P161

DESCRIPTION

The ADCAPure P161 is a series of angle design direct acting diaphragm sensing pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean steam, compressed air, water and other gases or liquids compatible with the construction materials and valve design.

MAIN FEATURES

Spring or dome-loading.
Non-rising adjustment knob.
Compact design with clamped body.
Available with low pressure diaphragm.
FDA / USP Class VI compliant seals.
Completely machined from bar stock material, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Lock system, allows inline clean-in-place (CIP) and sterilization-in-place (SIP) operations.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE:

Clean steam, compressed air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS:

P161.

SIZES:

1/2" to 2"; DN 15 to DN 50.

REGULATING RANGES:

0,3 to 1,1 bar; 0,8 to 1,5 bar; 1 to 3 bar; 1,5 to 5 bar.

CONNECTIONS:

ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Horizontal installation. Vertical inlet and horizontal outlet. See IMI – Installation and maintenance instructions.

SANITARY PRESSURE REDUCING VALVES P163

DESCRIPTION

The ADCAPure P163 is a series of inline direct acting, diaphragm sensing pressure reducing valves. These regulators, available with spring or dome-loading, are designed for use with clean steam, compressed air, water and other gases or liquids compatible with the construction materials and valve design.

MAIN FEATURES

Spring or dome-loading.
Non-rising adjustment knob.
Compact inline design with clamped body.
FDA / USP Class VI compliant seals.
Completely machined from bar stock material, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Lock system, allows inline clean-in-place (CIP) and sterilization-in-place (SIP) operations.
- Bottom cover with drain connection.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean steam, compressed air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS: P163.

SIZES: 1/2" to 2"; DN 15 to DN 50.

REGULATING RANGES: 0,8 to 1,5 bar; 1 to 3 bar; 1,5 to 5 bar.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation. See IMI – Installation and maintenance instructions.

a) The loading control pressure can be up to a maximum of 0,2 bar above the required downstream pressure. b) ASME BPE 1/2" size is only available with metal to metal sealing. c) Mandatory in case of dome-loading. d) Consult TIS.GIA – General information ADCAPure – for further details and other surface finish options.

SANITARY PRESSURE REDUCING VALVES P173

DESCRIPTION

The ADCAPure P173 is a series of inline direct acting, diaphragm sensing pressure reducing valves. These spring-loading loaded regulators are designed for use with clean steam, compressed air, water and other gases or liquids compatible with the construction materials and valve design.

MAIN FEATURES

Compact inline design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from bar stock material, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Lock system, allows inline clean-in-place (CIP) and sterilization-in-place (SIP) operations.
- Bottom cover with drain connection.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean steam, compressed air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS: P173.

SIZES: 1 1/2" and 2"; DN 32 to DN 50.

REGULATING RANGES: 0,8 to 1,5 bar; 1 to 3 bar; 1,5 to 5 bar.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation.
See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 10	Category
1 1/2" and 2" – DN 32 to 50	SEP

LIMITING CONDITIONS *	
Maximum allowable pressure	10 bar
Maximum upstream pressure	8 bar
Maximum downstream pressure	5 bar
Minimum downstream pressure **	0,8 bar
Maximum operating temperature ***	180 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

** For tight shut off, with adjustment spring relaxed, ensure a minimum downstream pressure of 0,2 bar.

*** See "Ordering Codes" table for restrictions.

SANITARY PRESSURE SUSTAINING VALVES PS130

DESCRIPTION

The ADCAPure PS130 is a series of direct acting, diaphragm sensing pressure sustaining valves. These regulators, available with spring or dome-loading, are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction materials and valve design. Specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Panel mounting.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Wall mounting.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction.

AVAILABLE MODELS: PS130.

SIZES: 1/2" to 1"; DN 08 to DN 25.

REGULATING RANGES: 0,2 – 1,5 bar; 0,3 – 3 bar; 2 – 8 bar.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation is recommended. See IMI – Installation and maintenance instructions.

a) The loading control pressure can be up to a maximum of 1,2 bar above the required downstream pressure. b) Mandatory in case of dome-loading.
c) Consult TIS.GIA – General information ADCAPure – for further details and other surface finish options.

SANITARY PRESSURE SUSTAINING VALVES PS161

DESCRIPTION

The ADCAPure PS161 is a series of angle design direct acting diaphragm sensing pressure sustaining valves. These regulators, available with spring or dome-loading, are designed for use with clean steam, compressed air, water and other gases or liquids compatible with the construction materials and valve design.

MAIN FEATURES

Spring or dome-loading.
Non-rising adjustment knob.
Compact design with clamped body.
Available with low pressure diaphragm.
FDA / USP Class VI compliant seals.
Completely machined from bar stock material, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean steam, compressed air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS: PS161.

SIZES: 1/2" to 2"; DN 15 to DN 50.

REGULATING RANGES: 0,8 to 1,5 bar; 1 to 3 bar; 1,5 to 8 bar.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation. Horizontal inlet and vertical outlet. See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 10	Category
1/2" to 2" – DN 15 to 50	SEP

LIMITING CONDITIONS *	
Maximum allowable pressure	10 bar
Maximum upstream pressure	8 bar
Minimum upstream pressure	0,8 bar
Maximum operating temperature **	180 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

** See "Ordering Codes" table for restrictions.

SANITARY PRESSURE SUSTAINING VALVES PS163

DESCRIPTION

The ADCAPure PS163 is a series of inline direct acting diaphragm sensing pressure sustaining valves. These regulators, available with spring or dome-loading, are designed for use with clean steam, compressed air, water and other gases or liquids compatible with the construction materials and valve design.

MAIN FEATURES

Spring or dome-loading.
Non-rising adjustment knob.
Compact inline design with clamped body.
FDA / USP Class VI compliant seals.
Completely machined from bar stock material, no castings or forgings are used.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- Bottom cover with drain connection.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean steam, compressed air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS: PS163.

SIZES: 1/2" to 2"; DN 15 to DN 50.

REGULATING RANGES: 0,8 to 1,5 bar; 1 to 3 bar; 1,5 to 8 bar.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation. See IMI – Installation and maintenance instructions.

SANITARY PRESSURE SUSTAINING VALVES

PS173

DESCRIPTION

The ADCAPure PS173 is a series of inline direct acting, diaphragm sensing pressure sustaining valves. These spring-loading loaded regulators are designed for use with clean steam, compressed air, water and other gases or liquids compatible with the construction materials and valve design.

MAIN FEATURES

Compact inline design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.
Completely machined from bar stock material, no castings or forgings are used on the standard version.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.
External: ≤ 0,76 µm Ra – SF3.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

Leakage line connection.

Top cap (adjustment screw with cover).

Gauge connection on body.

Bottom cover with drain connection.

Different soft sealings for liquids and gases.

USE:

Clean steam, compressed air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS:

PS173.

SIZES:

11/2" and 2"; DN 32 to DN 50.

REGULATING RANGES:

0,8 to 1,5 bar; 1 to 3 bar; 1,5 to 8 bar.

CONNECTIONS:

ASME BPE, DIN and ISO clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.

The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Horizontal installation.

See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 10	Category
11/2" and 2" – DN 32 to 50	SEP

LIMITING CONDITIONS *	
Maximum allowable pressure	10 bar
Maximum upstream pressure	8 bar
Minimum upstream pressure	0,8 bar
Maximum operating temperature **	180 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.
** See "Ordering Codes" table for restrictions.

SANITARY TANK BLANKETING REGULATORS BKR2 (Low pressure reducing valve)

DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from the vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently, production losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition. The blanketing process consists in covering the stored medium, usually a liquid, with a gas (normally N₂).

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.
Body external: ≤ 0,76 µm Ra – SF3.
Cover: internal machined and external as casted.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- External sensing line connection (recommended for low set pressures < 10 mbar or high flow).
- Blanketing with vacuum.
- Hastelloy wetted parts.
- ATEX ⚡ version.

USE: Air, nitrogen, argon and other gases compatible with the construction.

AVAILABLE MODELS: BKR2 – low pressure reducing valve.

SIZES: 1"; DN 25.

REGULATING RANGES: 5 to 10 mbar; 10 to 50 mbar; 20 to 200 mbar; 50 to 500 mbar; 5 to 4000 mbar (dome-loading).

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules. Flanged EN 1092-1 PN 16. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation recommended, to allow drainage, or horizontal as close to the process as possible in order to prevent long pipe sections and flow restrictions. See IMI – Installation and maintenance instructions.

TANK BLANKETING REGULATORS BKRI2 (Low pressure reducing valve)

DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from the vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently, production losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition. The blanketing process consists in covering the stored medium, usually a liquid, with a gas (normally N2).

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.

STANDARD SURFACE FINISH

Internal movable parts and machined surfaces: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surfaces: as casted.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- External sensing line connection (recommended for low set pressures < 10 mbar or high flow).
- Blanketing with vacuum.
- ATEX  version.

USE:

Air, nitrogen, argon and other gases compatible with the construction.

AVAILABLE MODELS:

BKRI2 – low pressure reducing valve.

SIZES:

1/2" and 1"; DN 15 and DN 25.

REGULATING RANGES:

5 to 10 mbar; 10 to 50 mbar; 20 to 200 mbar; 50 to 500 mbar; 5 to 4000 mbar (dome-loading).

CONNECTIONS:

Flanged EN 1092-1 PN 16.
Flanged ASME B16.5 Class 150.

INSTALLATION:

Vertical installation recommended, to allow drainage, or horizontal as close to the process as possible in order to prevent long pipe sections and flow restrictions.
See IMI – Installation and maintenance instructions.

SANITARY TANK BLANKETING REGULATORS
BKV2
(Low pressure vent valve)

DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from the vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently, production losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition. The blanketing process consists in covering the stored medium, usually a liquid, with a gas (normally N2).

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
Body external: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Cover: internal machined and external as casted.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- External sensing line connection.
- Blanketing with vacuum.
- Hastelloy wetted parts.
- ATEX ⚡ version.

USE:

Air, nitrogen, argon and other gases compatible with the construction.

AVAILABLE MODELS:

BKV2 – low pressure venting valve.

SIZES:

1"; DN 25.

REGULATING RANGES:

5 to 10 mbar; 10 to 50 mbar; 20 to 200 mbar; 50 to 500 mbar; 5 to 4000 mbar (dome-loading).

CONNECTIONS:

ASME BPE, DIN and ISO clamp ferrules.
Flanged EN 1092-1 PN 16. Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Vertical installation recommended, to allow drainage, or horizontal as close to the process as possible in order to prevent long pipe sections and flow restrictions. See IMI – Installation and maintenance instructions.

TANK BLANKETING REGULATORS
BKVi2
(Low pressure vent valve)

DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from the vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently, production losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition. The blanketing process consists in covering the stored medium, usually a liquid, with a gas (normally N2).

MAIN FEATURES

Compact design.
Non-rising adjustment knob.
FDA / USP Class VI compliant seals.

STANDARD SURFACE FINISH

Internal movable parts and machined surfaces: ≤ 0,76 µm Ra – SF3.
Other surfaces: as casted.
Ultrasonic cleaning.

OPTIONS:

- Leakage line connection.
- Dome-loading.
- Top cap (adjustment screw with cover).
- Gauge connection on body.
- External sensing line connection.
- Blanketing with vacuum.
- ATEX  version.

USE:

Air, nitrogen, argon and other gases compatible with the construction.

AVAILABLE MODELS:

BKVi2 – low pressure venting valve.

SIZES:

1/2" and 1"; DN 15 and DN 25.

REGULATING RANGES:

5 to 10 mbar; 10 to 50 mbar; 20 to 200 mbar; 50 to 500 mbar; 5 to 4000 mbar (dome-loading).

CONNECTIONS:

Flanged EN 1092-1 PN 16.
Flanged ASME B16.5 Class 150.

INSTALLATION:

Vertical installation recommended, to allow drainage, or horizontal as close to the process as possible in order to prevent long pipe sections and flow restrictions.
See IMI – Installation and maintenance instructions.

TWO-WAY HYGIENIC CONTROL VALVES V926H

DESCRIPTION

The ADCAPure V926H is a series of single seated two-way hygienic control valves with angle connections. These valves are designed to regulate and accurately control flow of liquids and gases and are suitable for hygienic applications found in the pharmaceutical, cosmetic, fine chemical and food & beverage industries.

The V926H can be assembled with pneumatic, hydraulic or electric actuators, for modulating and shut-off control tasks.

MAIN FEATURES

Completely manufactured from bar stock material.
Body and bonnet are connected by a clamp connection, allowing fast and easy maintenance procedures.
Cavity-free with no air trap locations.
Metal to metal or soft sealing.
Self-drainable design.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Soft valve sealing.
- Reduced bore trims.
- Steam barrier.
- Inline connections.

USE:

Saturated steam, hot and superheated water.
Process fluids, liquids, air and gases compatible with the construction.

AVAILABLE MODELS:

V926H.

SIZES:

1/2" to 4".

CONNECTIONS:

ASME BPE clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION:

Horizontal installation. Vertical inlet and horizontal outlet. See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
1/2" to 2"	SEP
2 1/2" to 4"	1 (CE marked)

LIMITING CONDITIONS *	
Maximum allowable pressure	16 bar @ 20 °C
Maximum operating pressure	10 bar
Maximum operating pressure (steam)	6 bar
Maximum operating temperature	150 °C
Maximum operating temperature (steam and water) **	170 °C
Minimum operating temperature	-10 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

** With EPDM seals.

TWO-WAY ASEPTIC CONTROL VALVES
V926A

DESCRIPTION

The ADCAPure V926A is a series of single seated two-way aseptic control valves with angle connections. These valves are designed to regulate and accurately control flow of liquids and gases and are suitable for high purity applications found in the pharmaceutical, cosmetic, fine chemical and food & beverage industries. The V926A can be assembled with pneumatic, hydraulic or electric actuators, for modulating and shut-off control tasks.

MAIN FEATURES

Completely manufactured from bar stock material. Body and bonnet are connected by a clamp connection, allowing fast and easy maintenance procedures. High-performance EPDM diaphragm stem sealing. Cavity-free with no air trap locations. Metal to metal or soft sealing. Self-drainable design.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.
External: ≤ 0,76 µm Ra – SF3.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS: Soft valve sealing.
Reduced bore trims.
Heating chamber.
Inline connections.

USE: Saturated steam, hot and superheated water.
Process fluids, liquids, air and gases compatible with the construction.

AVAILABLE MODELS: V926A.

SIZES: 1/2" to 2".

CONNECTIONS: ASME BPE clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation. Vertical inlet and horizontal outlet. See IMI – Installation and maintenance instructions.

TWO-WAY HYGIENIC CONTROL VALVES V928

DESCRIPTION

The ADCAPure V928 is a series of two or three-way hygienic control valves with angle or horizontal connections. These valves are designed to regulate and accurately control flow of liquids and gases and are suitable for hygienic applications found in the pharmaceutical, cosmetic, fine chemical and food & beverage industries. The V928 can be assembled with pneumatic, hydraulic or electric actuators, for modulating and shut-off control tasks.

MAIN FEATURES

Completely manufactured from bar stock material.
Body and bonnet are connected by a clamp connection, allowing fast and easy maintenance procedures.
Cavity-free with no air trap locations.
Metal to metal or soft sealing.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra}$ – SF1.
External: $\leq 0,76 \mu\text{m Ra}$ – SF3.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS: Soft valve sealing.
Reduced bore trims.
Steam barrier.

USE: Saturated steam, hot and superheated water.
Process fluids, liquids, air and gases compatible with the construction.

AVAILABLE MODELS: V928L – two-way angle design.
V928H – two-way horizontal design.

SIZES: DN 15 to DN 100.

CONNECTIONS: DIN threads, clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation. See IMI - Installation and maintenance instructions.

Remarks: Face to face dimensions are not standardized. Other dimensions and standards on request.
Configurations with overlapped connections are only possible for tube weld (ETO) versions.
A1 and B1 – Tube weld (ETO) according to DIN 11866-A (DIN 11850-2).
A2, B2 and F – Clamp ferrules according to DIN (DIN 32676-A). Dimension “F” refers to the ferrule flange diameter.
A3 and B3 – Hygienic male threads according to DIN (DIN 11851) for pipes according to DIN 11866-A (DIN 11850-2).
Alternative: Aseptic male threads according to DIN (DIN 11864 -1 Form A) for pipes according to DIN 11866-A (DIN 11850-2).
* When ordering without actuator dimension, if any.
** Based on the standard valve V928L with tube weld (ETO) connections. For other versions, consult manufacturer.

* Available spare parts; ** Others on request.
Remarks: FDA / USP Class VI seals certificate on request.
All valves have a serial number. In case of non-standard valves, this number must be supplied if spare parts are ordered.

V928L

Two-way angle design with one valve body, a vertical inlet and an horizontal outlet connection.
The vertical inlet connection has an integrated valve seat.

V928H

Two-way horizontal design with two valve bodies (upper and lower) and all the connections in the horizontal plain.
The valve seat is placed between the two main valve bodies.
Remark: Configurations with overlapped connections are only possible for tube weld (ETO) versions.

THREE-WAY HYGIENIC CONTROL VALVES V928

DESCRIPTION

The ADCAPure V928 is a series of two or three-way hygienic control valves with angle or horizontal connections. These valves are designed to regulate and accurately control flow of liquids and gases and are suitable for hygienic applications found in the pharmaceutical, cosmetic, fine chemical and food & beverage industries.

The V928 can be assembled with pneumatic, hydraulic or electric actuators, for modulating and shut-off control tasks.

MAIN FEATURES

Completely manufactured from bar stock material.
Body and bonnet are connected by a clamp connection, allowing fast and easy maintenance procedures.
Cavity-free with no air trap locations.
Metal to metal or soft sealing.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:
Soft valve sealing.
Reduced bore trims.
Steam barrier.

USE:
Saturated steam, hot and superheated water.
Process fluids, liquids, air and gases compatible with the construction.

AVAILABLE MODELS:
V928MV – three-way angle design.
V928MH – three-way horizontal design.
V928D – three-way diverting.

SIZES: DN 15 to DN 100.

CONNECTIONS: DIN threads, clamp ferrules or tube weld (ETO) ends. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation. See IMI - Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
DN 15 to 50	SEP
DN 65 to 100	1 (CE Marked)

LIMITING CONDITIONS *	
Maximum allowable pressure	16 bar @ 20 °C
Maximum operating pressure	10 bar
Maximum operating pressure (steam)	6 bar
Maximum operating temperature	150 °C
Maximum operating temperature (steam and water) **	170 °C
Minimum operating temperature	-10 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

** With EPDM seals.

SAFETY RELIEF VALVES SRV6

DESCRIPTION

The ADCAPure SRV6 series aseptic safety relief valves with angle type connections are designed for use with clean steam, air, water and other gases and liquids compatible with the construction materials. Main applications are overpressure protection on steam equipment, pressure vessels and pipelines, particularly within the pharmaceutical, cosmetic, fine chemical and food & beverage industries.

MAIN FEATURES

Completely machined from solid bar stock material.
FDA / USP Class VI compliant seals.
Elastomer bellows to isolate the product chamber from the spring housing.
Self drainable design.
Reduced dead leg.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra}$ – SF1.
External: $\leq 0,76 \mu\text{m Ra}$ – SF3.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Manual lifting device.
- Pneumatic lifting device (for CIP/SIP).
- Lift indicator.
- Blocking system.
- Gas tight assembly.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean steam, air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS: SRV6.

SIZES: 3/4" x 1", 1" x 1 1/2" and 1 1/2" x 2".
DN 20 x 25, DN 25 x 40, DN 32 x 40 and DN 40 x 50.

CONNECTIONS: ASME BPE and DIN clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation. See IMI – Installation and maintenance instructions.

DESIGN: DIN EN ISO 4126-1.
PED – Pressure Equipment Directive.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
All sizes	4 (CE marked)

CE Marking: This product has been designed for use on steam, air and other gases which are in Group 2 and 1 (only oxygen, others on request) of the European PED - Pressure Equipment Directive in use and it complies with its requirements. The product carries the CE mark.

LIMITING CONDITIONS *	
Maximum operating pressure	16 bar
Maximum operating temperature **	180 °C
Minimum operating temperature **	-40 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

** See "Ordering Codes" table for restrictions.

OPTIONS

MANUAL LIFTING DEVICE	PNEUMATIC LIFTING DEVICE *	LIFT INDICATOR **	BLOCKING SYSTEM	GAS TIGHT

* For $d_0 = 23 \text{ mm}$ and set pressures above 7 bar, the high capacity pneumatic lifting device is required. Consult the manufacturer.

** 3 wire PNP sensor with NO contact (NC on request), M8 x 1 male connector and 10 to 30 V DC supply voltage. Others on request.

Optional manual lifting device

Optional pneumatic lifting device

SAFETY RELIEF VALVES SRV8

DESCRIPTION

The ADCAPure SRV8 series aseptic safety relief valves with angle type connections are designed for use with clean steam, air, water and other gases and liquids compatible with the construction materials. Main applications are overpressure protection on steam equipment, pressure vessels and pipelines, particularly within the pharmaceutical, cosmetic, fine chemical and food & beverage industries.

MAIN FEATURES

Completely machined from solid bar stock material.
FDA / USP Class VI compliant seals.
Elastomer bellows to isolate the product chamber from the spring housing.
Self drainable design.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Manual lifting device.
- Pneumatic lifting device (for CIP/SIP).
- Lift indicator.
- Blocking system.
- Gas tight assembly.
- Different soft sealings for liquids and gases.
- Degreased for oxygen application.

USE: Clean steam, air, water and other gases and liquids compatible with the construction.

AVAILABLE MODELS: SRV8.

SIZES: 3/4" x 1", 1" x 1 1/2" and 1 1/2" x 2".
DN 20 x 25, DN 25 x 40, DN 32 x 40 and DN 40 x 50.

CONNECTIONS: ASME BPE and DIN clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation. See IMI – Installation and maintenance instructions.

DESIGN: DIN EN ISO 4126-1.
PED – Pressure Equipment Directive.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
All sizes	4 (CE marked)

CE Marking: This product has been designed for use on steam, air and other gases which are in Group 2 and 1 (only oxygen, others on request) of the European PED - Pressure Equipment Directive in use and it complies with its requirements. The product carries the CE mark.

LIMITING CONDITIONS *	
Maximum operating pressure	16 bar
Maximum operating temperature **	180 °C
Minimum operating temperature **	-40 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

** See "Ordering Codes" table for restrictions.

OPTIONS

MANUAL LIFTING DEVICE	PNEUMATIC LIFTING DEVICE *	LIFT INDICATOR **	BLOCKING SYSTEM	GAS TIGHT

* For $d_0 = 23 \text{ mm}$ and set pressures above 7 bar, the high capacity pneumatic lifting device is required. Consult the manufacturer.

** 3 wire PNP sensor with NO contact (NC on request), M8 x 1 male connector and 10 to 30 V DC supply voltage. Others on request.

Optional manual lifting device

Optional pneumatic lifting device

SANITARY AIR VENT VALVES SAV10

DESCRIPTION

The SAV10 sanitary air vent is a self-acting valve designed for air venting applications with liquids. The valve closes when filled with liquid product. As the level falls, the valve opens if pressure is also relieved. The valve does not open under operating pressure, thus being mostly used as a start-up bleeding valve. Typical applications include air venting in CIP lines (e.g. installed at suction of SIP return pump to prevent air lock), tanks, high points in pipelines, amongst others. Specifically designed for hygienic systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Compact and easy to install.
Springless design.
Complete 316L stainless steel construction, including float.
Different models available depending on the intended application.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

USE: Water and other liquids compatible with the construction.

AVAILABLE MODELS: SAV10 – soft upper seat; metal lower seat.
SAV10D – soft upper and lower seats.
SAV10CK – soft upper seat; grooved lower seat.

SIZES: 1" x 3/4" and 1" x 1".

CONNECTIONS: ASME BPE clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation.
See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 10	Category
1" x 3/4" and 1" x 1"	SEP

LIMITING CONDITIONS *	
Maximum operating pressure	10 bar
Minimum closing pressure – silicone seals	0,7 bar
Minimum closing pressure – EPDM, FPM or FFKM seals	1,5 bar
Maximum operating temperature	150 °C
Minimum operating temperature	-10 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.
Min. liquid specific weight: 0,75 kg/dm³

MODEL	DIFFERENTIAL PRESSURE (bar)												
	0,5	0,7	1	1,5	2	3	4	5	6	7	8	9	10
SAV10	470	567	698	897	1086	1451	1812	2174	2536	2897	3259	3620	3982

Values shown refer to capacities of air discharge at 15 °C, under average atmospheric pressure (1013 mbar).
If the temperature of the air differs from 15 °C, the discharge capacity can be corrected by multiplying it by: $\frac{288}{273 + T}$, where T is the actual temperature in °C.
It may be assumed that the temperature of the air is equal to the temperature of the liquid.

OPERATION

The SAV10 air vents are composed of a stainless steel valve body and cover and a free-moving stainless steel ball float.

When the system is starting up, the valve vents air to the outlet. As pressure increases and the product level rises, the float becomes buoyant and closes the valve once it reaches the upper soft seat. When the product level falls, the valve will only open and vent excess air once the pressure is also relieved.

Three different models are available, distinguishable by the design of the lower seat in the body.

The SAV10 is the standard unit, with a metal-sealed lower seat. As such, when the ball float rests on the lower seat (metal-to-metal contact), some air may be permitted to re-enter the system, either while the system is depressurized or in the case of vacuum.

The SAV10D features a lower seat with soft sealing, which prevents backflow of air into the system, thus preventing possible contamination when the system is depressurized or in case of vacuum.

The SAV10CK features a grooved body. As such, when the float rests on the lower seat, air is permitted to flow, in either direction, through the grooves. It was designed for applications where air should be allowed to flow freely in and out of the system, while the product must be kept inside.

VACUUM BREAKERS
VB16C

DESCRIPTION

The VB16C vacuum breakers are simple and reliable devices that automatically relieve or "break" an unwanted vacuum condition, restoring the atmospheric pressure.

This device is particularly suitable for steam heated units of small and medium volume, such as heat exchangers and heating coils. Can also be used in gas systems where atmospheric air is allowed to enter the pipeline or vessel.

MAIN FEATURES

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

USE: Saturated steam and other gases compatible with the construction.

AVAILABLE MODELS: VB16C.

SIZES: 1"; DN 25.

REGULATING RANGES: 0,05 – 0,10 bar; 0,09 – 0,20 bar; 0,19 – 0,30 bar; 0,29 – 0,40 bar; 0,39 – 0,50 bar. *

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation. See IMI – Installation and maintenance instructions.

CAPACITY CHART

* Values shown refer to the differential pressure between atmospheric pressure and the actual pressure inside the pipeline or vessel.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
1" – DN 25	SEP

LIMITING CONDITIONS *	
Maximum operating pressure	16 bar @ 120 °C
Maximum operating pressure (steam)	9 bar
Max. operating temperature	150 °C @ 12 bar
Max. operating temperature (steam)	180 °C
Minimum operating temperature	-10 °C

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

HYGIENIC STEAM FILTERS ISH10i

DESCRIPTION

The ISH10i high efficiency filters are used to remove contaminated particles from gases such as steam and compressed air.

The optimized construction of these units offers low differential pressure at high flow rates.

All sizes are built in two halves and are joined by a sanitary clamp ferrule according to DIN 32676 Series A.

The replaceable filter elements are made of sintered austenitic stainless steel and available with 1, 5 or 25 micron absolute rating.

MAIN FEATURES

Several retention rates available.

Good durability against aggressive gases.

Porosity level above 50% to ensure high particle and dirt load capacity as well as good flow rate at a low differential pressure.

Regeneration by ultrasonic cleaning.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.

External: $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.

Other surface conditions see TIS.GIA – General information

ADCAPure.

Ultrasonic cleaning.

OPTIONS: Air vent and bottom drain connections.
Other connections and dimensions.
Vertical installation design (ISV10i).

USE: Steam, compressed air and other gases.

AVAILABLE
MODELS: ISH10i.

RETENTION
RATES: 1, 5 and 25 micron.

SIZES: 1/2" to 2"; DN 10 to DN 50.

CONNECTIONS: ASME BPE, DIN and ISO clamp ferrules.
Others on request.

INSTALLATION: Horizontal installation with the drain connection pointing downwards.
See IMI – Installation and maintenance instructions.

CULINARY STEAM FILTERS
ISC20i and ISC20i2

DESCRIPTION

The ISC20i and ISC20i2 high efficiency filters are used to remove contaminated particles from gases such as steam and compressed air.
The optimized construction of these units offers low differential pressure at high flow rates.
All sizes are built in two halves, with 1/4" to 3" being joined by a sanitary clamp ferrule according to DIN 32676 Series A. Whereas 4" to 6" are joined by bolts and nuts. All sizes include plugged drain and vent connections.
The replaceable filter elements are made of sintered austenitic stainless steel and available with 1, 5 or 25 micron absolute rating.

MAIN FEATURES

Several retention rates available.
Good durability against aggressive gases.
Porosity level above 50% to ensure high particle and dirt load capacity as well as high flow rates at a low differential pressure.
Regeneration by ultrasonic cleaning.

STANDARD SURFACE FINISH

Internal wetted parts upstream of filter elements:
≤ 1,6 µm Ra for model ISC20i.
As casted for model ISC20i2.
Internal wetted parts downstream of filter elements:
≤ 0,76 µm Ra – SF3, for all models.
External:
Satin bead blast finish. As casted body for model ISC20i2.
Other surface conditions see TIS.GIA – General information ADCAPure.

USE: Steam, compressed air and other gases.

AVAILABLE MODELS: ISC20i – AISI 316L / 1.4404 stainless steel.
ISC20i2 – CF8M / 1.4408 body and AISI 316L / 1.4404 cover.

RETENTION RATES: 1, 5 and 25 micron.

SIZES: 1/4" to 6"; DN 10 to DN 150.

CONNECTIONS: Female threaded ISO 7 Rp or NPT.
Tube weld (TW).
Flanged EN 1092-1 PN 16.
Flanged ASME B16.5 Class 150.
Others on request.

INSTALLATION: Horizontal installation with the drain connection pointing downwards.
See IMI – Installation and maintenance instructions.

Remark: we recommend a second filter element set as a spare part to ensure minimum downtime when replacing the one in use after saturation.

SANITARY SIGHT GLASSES SWS

DESCRIPTION

The SWS sanitary sight glasses are designed to monitor liquid flow in any direction.
Sight glasses, also called flow indicators, are usually employed to detect either the presence or absence of fluid flow, turbulence, colour, etc. They are specially recommended for high purity applications.

MAIN FEATURES

Compact design.
Completely machined from bar stock materials, no castings or forgings are used on the standard version.
Precision borosilicate glass mounted without stress.
Excellent visualization.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.
External: ≤ 0,76 µm Ra – SF3.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS:	Full view design.
USE:	Clean steam, water and other liquids and gases compatible with the construction.
AVAILABLE MODELS:	SWS.
SIZES:	1/2" to 4".
CONNECTIONS:	ASME BPE clamp ferrules. Others on request.
PACKAGING:	Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.
INSTALLATION:	In any position. See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
Size	Category
1/2" to 4"	SEP

LIMITING CONDITIONS *	
Maximum operating temperature – EPDM seals	150 °C
Maximum operating temperature – EPDM seals (steam and water) **	180 °C
Maximum operating temperature – PTFE seals	200 °C
Minimum operating temperature	-10 °C

* Other limits on request. Maximum operating conditions may be limited by the equipment end connections due to normative restrictions.
** High performance EPDM. Maximum operating temperature of 210 °C, for short periods of time.

SANITARY CHECK VALVES SRT10

DESCRIPTION

The ADCAPure SRT10 all stainless steel disc check valve has a compact design and is specially designed for use with clean steam, hot condensate, WFI and other process fluids. These valves are particularly recommended for use in high purity applications found in the pharmaceutical, fine chemical and cosmetic industries.

MAIN FEATURES

Compact design.
Spring loaded.
Low friction stem guiding.
Completely machined from bar stock material, no castings or forgings are used on the standard version.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra}$ – SF1.
External: $\leq 0,76 \mu\text{m Ra}$ – SF3.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

USE: Clean steam, water and other liquids and gases compatible with the construction.

AVAILABLE MODELS: SRTV10 – vertical installation.
SRTH10 – horizontal installation.

SIZES: 1/2" to 4".

CONNECTIONS: ASME BPE clamp ferrules or tube weld (ETO) ends.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical or horizontal according to the selected model and use.
See IMI – Installation and maintenance instructions.

HIGH PURITY BALL VALVES M3HP (1/2" to 2" – DN 10 to DN 50)

DESCRIPTION

The ADCAPure M3HP three piece body ball valves are isolating valves designed for use with clean steam, condensate and other gases and liquids used in high purity and aseptic processes. The valve is not designed as a control valve and should only be used as an isolating valve, fully open or fully closed. The product is mainly designed for the pharmaceutical, biotech, semiconductor, cosmetics, fine chemical and food & beverage industries.

MAIN FEATURES

- True bore floating ball design.
- Completely made from solid bar stock material.
- Can be serviced without removal from the pipeline.
- Bidirectional.
- Antistatic device.
- Anti blow out proof stem.
- Tube weld with loose body flanges (360° rotation after installation).
- ISO 5211 mounting (with adapter for sizes below 1" and DN 20).

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External : $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- ISO 5211 mounting with flange adapter for sizes below 1" and DN 20.
- Degreased for oxygen use.
- Cavity fillers.
- Lever with locking system.

For more options and extras, please consult IS M3H.100 – Sanitary Ball Valves Additional Options and Extras.

USE: Clean steam, gases and liquids compatible with the construction.

AVAILABLE MODELS: M3HP – complete bar stock construction.

SIZES: 1/2" to 2"; DN 10 to DN 50.

CONNECTIONS: ASME BPE or DIN clamp ferrules, tube weld (ETO) ends or a combination of both. Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED - European Directive)		
PN 63	PN 100	Category
DN 25 to 32	1/2" to 1" DN 10 to 20	SEP
1 1/2" to 2" DN 40 and 50	—	1 (CE Marked)

We reserve the right to change the design and material of this product without notice.

IS M3HP.010 E 01.23

PRESSURE / TEMPERATURE LIMITS

Tube weld easy and quick installation

Remark: Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

Valves with tube weld (ETO) connections are fitted, as standard, with loose body flanges which allow installation with no need to align the end connections. After installation the valve can rotate freely 360° to the desired orientation.

HIGH PURITY BALL VALVES M3HP (21/2" to 4" – DN 65 to DN 100)

DESCRIPTION

The ADCAPure M3HP three piece body ball valves are isolating valves designed for use with clean steam, condensate and other gases and liquids used in high purity and aseptic processes. The valve is not designed as a control valve and should only be used as an isolating valve, fully open or fully closed. The product is mainly designed for the pharmaceutical, biotech, semiconductor, cosmetics, fine chemical and food & beverage industries.

MAIN FEATURES

True/full bore floating ball design.
Completely made from solid bar stock material.
Can be serviced without removal from the pipeline.
Bidirectional.
Antistatic device.
Anti blow out proof stem.
Tube weld with loose body flanges (360° rotation after installation).
ISO 5211 mounting.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External : $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS:

- Degreased for oxygen use.
- Cavity fillers.
- Lever with locking system.

For more options and extras, please consult IS M3H.100 – Sanitary Ball Valves Additional Options and Extras.

USE: Clean steam, gases and liquids compatible with the construction.

AVAILABLE MODELS: M3HP – Complete bar stock construction.

SIZES: 21/2" to 4"; DN 65 to DN 100.

CONNECTIONS: ASME BPE or DIN clamp ferrules, tube weld (ETO) ends or a combination of both.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED - European Directive)	
PN 40	Category
21/2" to 4" – DN 65 to 100	1 (CE Marked)

We reserve the right to change the design and material of this product without notice.

IS M3HP.065 E 02.23

PRESSURE / TEMPERATURE LIMITS

Remark: Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

Tube weld easy and quick installation

Valves with tube weld (ETO) connections are fitted, as standard, with loose body flanges which allow installation with no need to align the end connections. After installation the valve can rotate freely 360° to the desired orientation.

HIGH PURITY BALL VALVES M3HP TRUE BORE (6")

DESCRIPTION

The ADCAPure M3HP three piece body ball valves are isolating valves designed for use with clean steam, condensate and other gases and liquids used in high purity and aseptic processes. The valve is not designed as a control valve and should only be used as an isolating valve, fully open or fully closed. The product is mainly designed for the pharmaceutical, biotech, semiconductor, cosmetics, fine chemical and food & beverage industries.

MAIN FEATURES

True bore floating ball design.
Completely made from solid bar stock material.
Can be serviced without removal the from the pipeline.
Bidirectional.
Antistatic device.
Anti blow out proof stem.
Tube weld with loose body flanges (360° rotation after installation).
ISO 5211 mounting.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External : $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

OPTIONS: Degreased for oxygen use.
Cavity fillers.
Gearboxes.
For more options and extras, please consult
IS M3H.100 – Sanitary Ball Valves Additional
Options and Extras.

USE: Clean steam, gases and liquids compatible with
the construction.

**AVAILABLE
MODELS:** M3HP – Complete bar stock construction.

SIZES: 6".

CONNECTIONS: ASME BPE clamp ferrules, tube weld (ETO)
ends or a combination of both.
Others on request.

PACKAGING: Assembling and packaging in a clean room
certified according to ISO 14644-1.
The product is end capped and sealed with
recyclable thermo-shrinkable plastic film, to
avoid contamination.

INSTALLATION: See IMI – Installation and maintenance
instructions.

HYGIENIC BALL VALVES

M3H TRUE BORE

(1/2" to 2" – DN 10 to DN 50)

DESCRIPTION

The ADCAPure M3H three pieces body ball valves are isolating valves designed for use with clean steam, condensate and other gases and liquids used in high purity and aseptic processes. The valve is not designed as a control valve and should only be used as an isolating valve, fully open or fully closed. The product is mainly designed for the pharmaceutical, biotech, semiconductor, cosmetics, fine chemical and food & beverage industries.

MAIN FEATURES

- True bore floating ball design.
- A351 CF3M body and ends with ferrite content of less than 2% and low sulphur between 0,005 and 0,017%.
- Can be serviced without removal from the pipeline.
- Tube weld with loose body flanges (360° rotation after installation).
- Bidirectional.
- Antistatic device.
- Anti blow out proof stem.
- ISO 5211 mounting.

STANDARD SURFACE FINISH

- Internal wetted parts: ≤ 0,51 µm Ra – SF1.
- External: as casted.
- Other surface conditions see TIS.GIA – General information ADCAPure.
- Ultrasonic cleaning.

- OPTIONS:

- Different sealing materials.
 - Degreased for oxygen use.
 - Cavity fillers.
 - Lever with locking system.
- For more options and extras, please consult IS M3H.100 – Sanitary Ball Valves Additional Options and Extras.

- USE:

Clean steam, gases and liquids compatible with the construction.

- AVAILABLE MODELS:

M3H – investment casting.

- SIZES:

1/2" to 2"; DN 10 to DN 50.

- CONNECTIONS:

ASME BPE or DIN clamp ferrules, tube weld (ETO) ends or a combination of both. Others on request.

- PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1. The product is end capped and sealed with recyclable thermo-shrinkable plastic film to avoid contamination.

- INSTALLATION:

See IMI – Installation and maintenance instructions.

PRESSURE / TEMPERATURE LIMITS

Remark: Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

Valves with tube weld (ETO) connections are fitted, as standard, with loose body flanges which allow installation with no need to align the end connections. After installation the valve can rotate freely 360° to the desired orientation.

HYGIENIC BALL VALVES M3H TRUE BORE (6")

DESCRIPTION

The ADCAPure M3H three piece body ball valves are isolating valves designed for use with clean steam, condensate and other gases and liquids used in high purity and aseptic processes. The valve is not designed as a control valve and should only be used as an isolating valve, fully open or fully closed. The product is mainly designed for the pharmaceutical, biotech, semiconductor, cosmetics, fine chemical and food & beverage industries.

MAIN FEATURES

Full bore floating ball design.
A351 CF3M body and ends with ferrite content of less than 2 % and low sulphur between 0,005 and 0,017 %.
Can be serviced without removal from the pipeline.
Tube weld with loose body flanges (360° rotation after installation).
Bidirectional.
Antistatic device.
Anti blow out proof stem.
ISO 5211 mounting.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: as casted.
Other surface conditions see TIS.GIA – General information ADCAPure.
Ultrasonic cleaning.

OPTIONS: Different sealing materials.
Degreased for oxygen use.
Gearboxes.
Cavity fillers.
For more options and extras, please consult IS M3H.100 – Sanitary Ball Valves Additional Options and Extras.

USE: Clean steam, gases and liquids compatible with the construction.

AVAILABLE MODELS: M3H – investment casting.

SIZES: 6".

CONNECTIONS: ASME BPE clamp ferrules, tube weld (ETO) ends or a combination of both.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: See IMI – Installation and maintenance instructions.

CE MARKING – GROUP 2 (PED – European Directive)	
PN 16	Category
6"	1 (CE marked)

PRESSURE / TEMPERATURE LIMITS

Remark: Maximum operating conditions may be limited by the valve end connections due to normative restrictions.

Tube weld easy and quick installation

Valves with tube weld (ETO) connections are fitted, as standard, with loose body flanges which allow installation with no need to align the end connections. After installation the valve can rotate freely 360° to the desired orientation.

SANITARY BALL VALVES ADDITIONAL OPTIONS AND EXTRAS

STEM EXTENSION UNITS

SEF/H – Stem extension where the overall height readily clears common insulation thickness. The installation of the The stem extension unit is tight against the ball valve body to avoid fluid leakage. The stem extension unit allows ISO 5211 mounting.

The lever handle parts from the valve should be reassembled on the extension unit when retrofitting.

SEF/P – Stem extension with the same features as the SEF/H unit plus an additional packing set which serves as a safety feature in case of leakage through the ball valve stem seals.

The stem extension also features two sensing ports to provide a means of leakage detection.

SEF/A – Direct mounting assembly unit with barstock body and enclosed stem coupling. Compact and cleaner than typical ISO 5211 brackets and couplings which tend to accumulate dust and impurities.

This mounting adapter serves dual purpose as a mounting adapter for actuators and a stem extension.

* Torque values for valves with PTFE or TFM standard seals at full differential pressure. The indicated torques are for valves operated frequently. Greater torques can be required for valves subject to long static periods. Safety margins not included in these figures. Values may vary depending on the working conditions.

** Torque values are related to valves with stem manufactured in AISI 316L/1.4404. In case of valves manufactured from other materials (executed under special request) please consult.

SPRING RETURN HANDLES

Spring return handles, also called “dead man’s handles” consist of an enclosed spring-loaded lever mechanism which ensures fail-safe operation when mounted in a quarter-turn valve. This device ensures that the valve cannot be left open (or closed) as a powerful spring will place the valve in the fail-safe position as soon as the operator releases the handle.

DIMENSIONS (mm)

VALVES WITH CONDENSATE DRAIN CONNECTION

Valves with condensate drain connection feature an additional port which allows drainage of steam condensate or trapped liquids from the valve body cavity. Valves with this option are also used to allow sampling of steam for purity checks or to serve as isolation means for safe maintenance of steam traps.

In addition to these features, the flow of steam surrounding the valve ensures complete sterilization of the valve body cavity.

HOW IT WORKS

Open position – The valve allows steam flow to the process. The steam trap is isolated from the flow to allow sterilization temperatures to be quickly reached.

Drain position – Condensate flows inside the valve body cavity and is discharged by an automatic steam trap connected to the bottom connection, preventing backup of liquid. Flow to the process, or sampling, is isolated.

Service position – Allows steam trap maintenance to be performed safely without the need of a second isolating valve, since in this position the valve is fully closed.

SANITARY PRESSURE GAUGES SMAN-63

DESCRIPTION

The ADCAPure SMAN-63 are reliable general purpose sanitary bourdon tube pressure gauges designed for pressure measurement of liquid and gaseous media. These units have a size diameter of 63 mm, range marked in bar and are fully manufactured in stainless steel.

MAIN FEATURES

Compact full stainless steel construction.
Wetted parts in AISI 316L / 1.4435 – flush diaphragm.
Designed according to EN 837-1.
Bayonet lock case with blow-out.
Suitable to be filled with glycerine.

USE: Gases and liquids compatible with the construction.

AVAILABLE MODELS: SMAN-63R – radial connection.
SMAN-63A – axial connection.

SIZES: 3/4".

CONNECTIONS: ASME BPE clamp ferrules.
Others on request.

MEASURING RANGES: 0 to 4 bar, 0 to 6 bar, 0 to 10 bar and 0 to 16 bar.

LIMITING CONDITIONS

Accuracy	±2,5% FS
IP rating	IP 65
Maximum allowable pressure	Full scale reading
Maximum operating temperature	120 °C *
Minimum operating temperature	-20 °C
Ambient temperature	-10 to 60 °C

* 150 °C for short term (cleaning).

HUMIDITY SEPARATORS S10H (Baffle design)

DESCRIPTION

When wet steam is used in sterilization, moisture in suspension reduces the heat transfer efficiency, and the validity of the sterilization process can be compromised.

The ADCAPure S10H series baffle separators remove moisture from steam pipelines. Steam passes through the separator and as a result of expansion, impact and swirling effects, the particles with a heavier specific gravity are separated, such as water droplets and moisture in suspension.

The condensate collected at the bottom of the separator must be automatically drained by a suitable steam trap.

MAIN FEATURES

- 316L stainless steel construction.
- No moving parts.
- Self drainable design.
- Clamped construction to ease access for cleaning operations.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.
External: Satin bead blast finish – 1,6 µm Ra.
Other surface conditions see TIS.GIA – General information ADCAPure.

OPTIONS: Vent connection.
Special connections and dimensions.

USE: Steam, compressed air and other gases.

AVAILABLE MODELS: S10H – horizontal connections, baffle design.
S10HA – S10H with air vent connection.

SIZES: 1/2" to 3".

CONNECTIONS: ASME BPE clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Always with the condensate discharge pointing downwards.
See IMI – Installation and maintenance instructions.

HUMIDITY SEPARATORS

S10HV

(Centrifugal design)

DESCRIPTION

When wet steam is used in sterilization, moisture in suspension reduces the heat transfer efficiency, and the validity of the sterilization process can be compromised.

The ADCAPure S10HV series centrifugal separators remove moisture from steam pipelines. Steam passes through the separator and as a result of centrifugal forces, impact and swirling effects, the particles with a heavier specific gravity are separated, such as water droplets and moisture in suspension.

The condensate collected at the bottom of the separator must be automatically drained by a suitable steam trap.

MAIN FEATURES

- 316L stainless steel construction.
- No moving parts.
- Self drainable design.
- Clamped construction to ease access for cleaning operations.

STANDARD SURFACE FINISH

Internal wetted parts: ≤ 0,51 µm Ra – SF1.

External: Satin bead blast finish – 1,6 µm Ra.

HUMIDITY SEPARATORS S11 (Centrifugal design)

DESCRIPTION

When wet steam is used in sterilization, moisture in suspension reduces the heat transfer efficiency, and the validity of the sterilization process can be compromised.

The ADCAPure S11 series centrifugal separators remove moisture from steam pipelines. Steam passes through the separator and, as a result of centrifugal forces, impact and swirling effects, the particles with a heavier specific gravity are separated, such as water droplets and moisture in suspension.

The condensate collected at the bottom of the separator must be automatically drained by a suitable steam trap.

MAIN FEATURES

316L stainless steel construction.

No moving parts.

Self drainable design.

Clamped construction to ease access for cleaning operations.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra}$ – SF1.

External: Satin bead blast finish – $1,6 \mu\text{m Ra}$.

Other surface conditions see TIS.GIA – General information ADCAPure.

OPTIONS: Vent connection.
Special connections and dimensions.

USE: Steam, compressed air and other gases.

AVAILABLE MODELS: S11 – horizontal connections.
S11A – S11 with air vent connection.

SIZES: 1/2" to 2".

CONNECTIONS: ASME BPE clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Always with the condensate discharge pointing downwards.
See IMI – Installation and maintenance instructions.

HYGIENIC DIRECT STEAM INJECTION HUMIDIFIERS DSHS

DESCRIPTION

The presence of chemicals used in water treatment of plant steam boilers which produce steam used in humidification systems can have toxic effects on human health. Regulations have come into force in some countries so that only clean steam is used for humidification purposes and, to meet such requirements.

The ADCAPure DSHS series of hygienic direct steam injection humidifiers are designed to ensure highly efficient and moisture free clean steam injection in air ducts and AHU for humidification purposes. These units are completely manufactured in 316L stainless steel, and are available as plug and play packaged solutions or alternatively as individual components to be incorporated into humidification systems. Each humidifier is manufactured as a bespoke solution to meet flow requirements and duct design with single or multiple injection tubes.

MAIN FEATURES

Quiet and efficient.
Hygienic design in 316L / 1.4404 stainless steel.
Bespoke injection tubes to meet flow requirements and duct design.
Fully jacketed injection tubes providing moisture free steam injection.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External: Satin bead blast finish – $1,6 \mu\text{m Ra}$.
Other surface conditions see TIS.GIA – General information ADCAPure.

OPTIONS: Fully assembled in a package.

USE: Clean steam.

AVAILABLE MODELS: DSHS10 and DSHS25.

INJECTION TUBE SIZES: $3/4" \times 1/2"$ and $1" \times 1/2"$.

CONNECTIONS: ASME BPE clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal or vertical (pointing upwards) installation in horizontal air ducts.
Horizontal installation in vertical air ducts. See IMI – Installation and maintenance instructions.

Single tube humidifier

Injection tube

S10HV
Centrifugal separator

OPERATION

Clean steam moves in the supply line passing, if necessary, through an ADCAPure pressure reducing valve to reduce it to humidification pressure (generally around 1 to 2 barg). Steam then passes through an ADCAPure S10HV centrifugal humidity separator which removes most of its moisture content. The separator special design dries the steam which is injected and also the steam which feeds the injection tube heating chamber keeping heating temperatures stable. As steam leaves the humidity separator and passes through the jacketed injection tubes it is kept at a constant temperature, preventing condensation to be carried over with the steam.

Condensate collects on the bottom of the separator and is removed from the system via a ADCAPure TSS6 thermostatic steam trap. Condensate which forms inside the injection tube heating chamber is removed by means of one or multiple steam traps depending on the case.

An ADCAPure hygienic control valve equipped with a fail-safe electric or pneumatic actuator provides accurate modulation of flow and, thus, precise humidity control.

ABSORPTION DISTANCE

Absorption distance is the dimension from the injection tube outlet to the downstream point where steam has been fully absorbed by the air passing through and is no longer visible as mist. The absorption distance serves as base for the calculation of the minimum distances to any obstacle (e.g. branches, filters, ventilators) installed downstream. If such obstacles would otherwise be located at a shorter distance, unabsorbed steam would hit those parts and condense, causing dripping which often results in microbial growth and, consequently, odors and an overall unhealthy air.

Absorption distance is mainly affected by:

- Air temperature: absorption distance decreases with increase in inlet air temperature.
- Inlet relative humidity: absorption distance decreases with increase in inlet relative humidity.
- Required relative humidity: absorption distance increases with increase in required relative humidity.
- Mixing homogeneity: absorption distance decreases with increase in mixing homogeneity.

SINGLE VS MULTI-TUBE HUMIDIFIERS

A single-tube humidifier is the most economically viable solution if a single injection tube respects the humidification load and the higher absorption distance (generally associated with single-tube humidifiers) is lower than the distance to any obstacle downstream – Consult Table 1 and Table 2.

If on the other hand, the available distance is insufficient to accommodate the necessary absorption distance of a single-tube solution or when duct height is significant then a multi-tube humidifier should be selected. This solution will shorten the necessary absorption distance by up to 4 times as the increase in injection points will decrease flow velocity and also promote an homogenous and efficient mixing – Consult Table 3 and Table 4.

TABLE 1 – INJECTION TUBE STEAM CAPACITY – SINGLE-TUBE (kg/h)

* Tube insertion length (see dimensions table).

TABLE 2 – MAXIMUM RECOMMENDED DUCT HEIGHT FOR SINGLE-TUBE HUMIDIFIER		
INJECTION TUBE	DSHS10	DSHS25
DUCT HEIGHT	Up to 900 mm	Up to 1100 mm

HOW TO SIZE

Example 1 – Single-tube humidifier

Installation position: Inside a horizontal air duct with 2000 mm of available downstream distance without obstacles.
Duct size (H x W): 500 x 800 mm
Maximum humidification load: 100 kg/h @ 1 barg

Step 1: Select the injection tube model

A single-tube humidifier is appropriate for the required absorption distance (see Note).

According to Table 1 a single DSHS25 injection tube respects the maximum humidification load as it ensures 158 kg/h for an insertion length between 601 and 900 mm.

Step 2: Select the humidity separator

The humidity separator should be of the same size as the pipeline upstream which has previously been sized accordingly, e.g. by pressure drop or velocity, not exceeding 25 m/s (recommended).
For the current example, with a maximum humidification load of 100 kg/h @ 1 barg, the recommended pipe size is 11/4" and so the appropriate humidity separator is a 11/4" ADCAPure S10HV.

Step 3: Select the control valve and actuator

After calculating the required Kv for the application one can find the valve Kvs on the respective ADCAPure control valve datasheet. For the current example, the selection could be e.g. a 11/2" ADCAPure V926H with a 25 mm seat and Kvs of 10 m³/h to suit the application. The valve can be fitted with an ADCATrol ELF series electric fail-safe spring return actuator or a reverse action ADCATrol PA series pneumatic actuator.

Step 4: Steam traps, pressure reducing station and ancillaries

A suitable trapping set must be installed on the drain connection of the humidity separator and heating chamber. A pressure reducing station may be required in some situations to reduce system pressure to the desired value and different valves and ancillaries may also be necessary. Consult the manufacturer for further information.

TABLE 3 – INJECTION TUBE STEAM CAPACITY – MULTI-TUBE (kg/h)																	
MODEL	C * (mm)	STEAM PRESSURE TO HUMIDIFIER SUPPLY CONNECTION (barg)															
		0,25	0,5	0,75	1	1,25	1,5	1,75	2	2,25	2,5	2,75	3	3,25	3,5	3,75	4
DSHS10	180 – 1000	43	62	74	86	94	102	112	121	126	133	141	149	153	157	166	172
	≥ 1001	58	85	99	116	126	139	151	163	171	179	190	201	206	211	222	233
DSHS25	330 – 1250	128	187	226	259	286	313	341	368	386	406	426	448	457	471	496	521
	≥ 1251	153	224	270	310	340	371	403	437	460	484	508	535	562	589	617	645

* Tube insertion length (see dimensions table).

TABLE 4 – MINIMUM RECOMMENDED NUMBER OF INJECTION TUBES FOR MULTI-TUBE HUMIDIFIER				
DUCT HEIGHT	Up to 1500 mm	1501 – 2000 mm	2001 – 2500 mm	above 2501 mm
Nº OF TUBES	2	3	4	5 or more

Example 2 – Multi-tube humidifier

Installation position: Inside a AHU with 500 mm downstream distance to fan entry
AHU size (H x W): 1600 x 1600 mm
Maximum humidification load: 180 kg/h @ 1,5 barg

Step 1: Select the injection tube model and quantity

A multi-tube humidifier is recommended in order to ensure complete steam absorption before reaching the fan entry (see Note).
According to table Table 4 a total of three injection tubes are recommended for a AHU height of 1600 mm. Their nominal size can then be selected according to Table 3. In this case, a set of three DSHS25 will ensure 371 kg/h for an insertion length ≥ 1251 mm.

Step 2: Select the humidity separator

The humidity separator should be of the same size as the pipeline upstream which has previously been sized accordingly, e.g. by pressure drop or velocity, not exceeding 25 m/s (recommended).
For the current example, with a maximum humidification load of 180 kg/h @ 1.5 barg, the recommended pipe size is 11/2" and so the appropriate humidity separator is a 11/2" ADCAPure S10HV.

Step 3: Select the control valve and actuator

After calculating the required Kv for the application one can find the valve Kvs on the respective ADCAPure control valve datasheet. For the current example, the selection could be e.g. a 11/2" ADCAPure V926H with a Kvs of 16 m³/h to suit the application. The valve can be fitted with an ADCATrol ELF series electric fail-safe spring return actuator or a reverse action ADCATrol PA series pneumatic actuator.

Step 4: Steam traps, pressure reducing station and ancillaries

A suitable trapping set must be installed on the drain connection of the humidity separator and one or multiple steam traps must also be installed to drain the heating chambers and manifold if any. A pressure reducing station may be required in some situations to reduce system pressure to the desired value and different valves and ancillaries may also be necessary. Consult the manufacturer for further information.

Note: For information on ADCAPure DSHS absorption distances consult the manufacturer. Required information: Inlet air temperature (°C), inlet relative humidity (%), outlet relative humidity (%), injection steam pressure (barg), maximum humidification load (kg/h), duct/AHU dimensions (H x W in mm).

INJECTION TUBES

DIMENSIONS (mm)																		
MODEL	A	B	B1	B2 *	C ** Min. - Max.	D	E	ØF	ØF1	G	ØG1	ØH	ØH1	I	J	L	ØM	WGT. (kg)

DSHS25	102,5	145,7	87,7	15,5	330 - 3100	50	4,9	50,5	25	M10	8,5	22,1	9,4	110	100	25,5	5	

* When thermal insulation is present, this dimension must be increased accordingly.
** Tube insertion length to be defined according to customer requirements (e.g. duct width).
*** To be confirmed after exact length is defined.

STEAM EMISSION DIRECTION

Steam injection should be against the air flow. In vertical air flow applications, steam should be injected upwards, regardless of the air flow direction.

SAMPLE COOLERS SC32P and SC32PP

DESCRIPTION

The ADCAPure SC32P sample cooler consists in a helical-coil heat exchanger used to take samples quickly and safely from steam generators, clean or pure steam systems, WFI and other high purity mediums. Its spiral design saves significant space without compromise and a counter current flow path maximizes heat transfer and consequently cooling efficiency. The vertical sampling side ensures self drainability, as medium flows naturally by gravity to the sample outlet with no chance to remain inside.

The device is available with integrated mounting brackets for fixed installation at the point of use or alternatively in a portable version (suffix PP) to carry along to any sampling point within the system.

MAIN FEATURES

Fully manufactured from corrosion-resistant 316L stainless steel.
Compact and efficient.
Self-drainable design eliminates possibility of sample retention.
Integrated mounting bracket and alternative portable version.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,51 \mu\text{m Ra} - \text{SF1}$.
External : $\leq 0,76 \mu\text{m Ra} - \text{SF3}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

USE: Steam, WFI and other liquids and condensable gases compatible with the construction.

AVAILABLE MODELS: SC32P – fixed installation version.
SC32PP – portable version.

SIZES AND CONNECTIONS: Cooling water inlet/outlet: 1/2" on body (ISO 228 or NPT) or 3/4" ASME BPE clamp ferrules.
Sample tube inlet/outlet: 8 mm O/D or 1/2" ASME BPE clamp ferrules.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation. See IMI – Installation and maintenance instructions.

OPERATION: Cooling water must be at its maximum flow before opening or closing the sample inlet valve, in order to avoid scalding.
Sample valve must also be closed before opening the cooling water valve.
Sample coil should always be completely immersed in water.

PERFORMANCE: 30 to 60 kg/h of sample water at $\approx 30^\circ\text{C}$ with $1 \text{ m}^3/\text{h} - 15^\circ\text{C}$ inlet cooling water (boilers up to 20 bar – 220°C). For other pressures, temperatures and/or certified values, consult manufacturer.

CLEAN STEAM INJECTORS SSI115

DESCRIPTION

The ADCAPure SSI115 is a direct steam injector completely manufactured from 316L stainless steel. It is designed for rapid heating of still or flowing media, inside tanks and mixers and is particularly suitable for application in the food and beverage industry. Steam enters through the inlet connection, passes along the center of the device and mixes with the cool medium, which is drawn in through radial holes.

MAIN FEATURES

Quiet operation.
Completely machined from 316L stainless steel.

STANDARD SURFACE FINISH

All surfaces: $\leq 0,51 \mu\text{m Ra}$ – SF1.
Other surface conditions see TIS.GIA – General information
ADCAPure.
Ultrasonic cleaning.

USE: Heating via direct injection of culinary or clean steam.

AVAILABLE
MODELS: SSI115.

SIZES: DN 15 x 50.

CONNECTIONS: DIN 32676-A clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Horizontal installation is recommended.
See IMI – Installation and maintenance instructions.

MATERIAL: AISI 316L / 1.4404.

CAPACITY CHART

Remark: Selection under shadow area is recommended.
Capacities shown are valid for vessels which are vented to atmosphere.

MUSHROOM STYLE AIR VENTS MSAV

DESCRIPTION

The ADCAPure MSAV series of mushroom style air vents are used in atmospheric tanks to prevent contamination from foreign matter via the vent connection. The device is fully manufactured from 316L stainless steel with a rounded mushroom cover, perforated barrier and clamped connections.

MAIN FEATURES

Complete 316L stainless steel construction.

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,76 \mu\text{m Ra}$ – SF3.
External: Satin bead blast finish – $1,6 \mu\text{m Ra}$.
Other surface conditions see TIS.GIA – General information
ADCAPure.

USE: Contamination prevention in atmospheric tanks and others.

AVAILABLE
MODELS: MSAV.

SIZES: 11/2" to 6"; DN 40 to DN 150.

CONNECTIONS: ASME BPE and DIN 32676-A clamp ferrules.
Others on request.

PACKAGING: Assembling and packaging in a clean room certified according to ISO 14644-1.
The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to avoid contamination.

INSTALLATION: Vertical installation.

MATERIAL: AISI 316L / 1.4404.

$$T(^{\circ}F) = (2,4 \times T(^{\circ}C)) + 25$$

$$N.m^3/h \text{ (0 } ^{\circ}C - 1013 \text{ mbar)}$$

$$K_v = \frac{Q_1}{195 \times P_1} \sqrt{d_1 \times T}$$

CALCULATION OF Kv FLOW COEFFICIENTS

Sizing of control valves and pressure regulators can be performed through calculation of flow coefficient, analysis of flow characteristic curves, nomographs or other empirical methods. The IEC 60534-2-1 is typically used for such tasks, most commonly for control valve sizing.

This section provides a simplified method for sizing which is based on the valve flow coefficient. This method is sufficiently accurate for most simple industrial applications.

In cases where:

- Flow rate and/or upstream pressure varies significantly - high turndown ratios.
- Safety valve set pressure is too close to PRV set pressure.
- Critical applications where events such as high noise emissions, erosion, cavitation or flashing may occur.

Contact our technical department for selection using our software.

Kv: Flow rate coefficient which represents the quantity of water, expressed in m³ at a temperature between 5 and 40 °C, that flows through the valve at a specified travel H with a differential pressure of 1 bar, in a one-hour period. Unit is m3/h.

Cv: Flow rate coefficient, similar to Kv, but in imperial units. The relationship is given by $Kv = 0,865 \cdot Cv$. Unit is gpm.

Kvs: Flow coefficient Kv value of the valve at rated stroke H_{100} . This value is indicated and published on the valve Information sheet (IS). Unit is m3/h.

Kv₁₀₀: Actual Kv flow coefficient of the valve at rated stroke H_{100} . This value may deviate ±10 % from the indicated Kvs.

PRESSURE DROP	MEDIUM		
	LIQUIDS	SATURATED STEAM	GASES
$p_2 > \frac{p_1}{2}$	$Kv = \dot{V}_L \sqrt{\frac{\rho_L}{\Delta p \cdot 1000}}$	$Kv = \frac{\dot{m}_s}{22,4 \cdot \sqrt{\Delta p \cdot p_2}}$	$Kv = \frac{\dot{V}_G}{514} \sqrt{\frac{\rho_G \cdot T}{\Delta p \cdot p_2}}$
$p_2 < \frac{p_1}{2}$		$Kv = \frac{\dot{m}_s}{11,2 \cdot p_1}$	$Kv = \frac{\dot{V}_G}{257 \cdot p_1} \sqrt{\rho_G \cdot T}$

Kv – Flow coefficient [m³/h]

p₁ – Upstream absolute pressure [bar]

p₂ – Downstream absolute pressure [bar]

Δp – Pressure drop (p1-p2) [bar]

Ṽ_L – Volumetric flow rate of liquid [m³/h]

Ṽ_G – Volumetric flow rate of gas at 0 °C and 1013 mbar [Nm³/h]

ṁ_s – Mass flow rate of steam [kg/h]

ρ_L – Density of liquid [kg/m³]

ρ_G – Density of gas [kg/m³]

T – Absolute temperature (T = 273 + t [°C]) [K]

The formulas shown in the previous table allow Kv calculation in accordance with the type of fluid and its operating conditions. The valve Kvs can be retrieved from its respective Information sheet (IS).

Control valves: If realistic operating conditions have been considered, as a rule, the calculated Kv should be around 70% to 80% of the selected valve Kvs, hence $Kvs \geq 1,3 \cdot Kv$.

Pressure regulators: In theory the ideal pressure regulator working range is between 10% to 70% of its rated Kvs value. Thus, if realistic operating conditions have been considered the calculated Kv should be at a maximum of 70% of the selected regulator's Kvs, hence $Kvs \geq 1,3 \cdot Kv$.

CONTROL VALVE SEAT LEAKAGE

SEAT LEAKAGE RATES		
VALVE SEALING	LEAKAGE CLASS ACC. TO IEC 60534-4	MAXIMUM SEAT LEAKAGE
Metal to metal *	III	≤ 0,1% of Kvs
Metal to metal Pressure balanced trim	IV	≤ 0,01% of Kvs
Metal to metal (lapped)	V	$1,8 \cdot 10^{-5} \cdot \Delta p \cdot D$ (l/h) $10,8 \cdot 10^{-6} \cdot D$ (Nm³/h)
Soft sealing	VI	$0,3 \cdot \Delta p \cdot f_L$

D – seat diameter in mm. **Δp** – differential pressure in bar. **f_L** – leakage rate factor. Refer to Table 3 in IEC 60534-4 section 5.5 for further details.

* Uncommon.

PIPE SIZING AND FLOW VELOCITY

Pipelines should be calculated considering flowrates and pressure drops, and various known methodologies are known and may be used for this purpose. To simplify and especially in cases where pipe lengths are small, sizing can be performed based exclusively on flow and velocity.

The values shown in the following table refer to recommended flow velocities in accordance with the type of fluid.

RECOMMENDED FLOW VELOCITIES [m/s]	
Flash and exhaust steam	15 to 25
Saturated steam	20 to 30
Superheated steam	35 to 65
Feedwater suction	0,5 to 1
Feedwater pressure	1,5 to 3,5
Drinking and service water	1 to 2
Compressed air and most other gases	15 to 20

The pipe inner diameter D in mm is given by

$$D = 18,8 \sqrt{\frac{\dot{V}}{u}}$$

where **Ṽ** is the volumetric flow rate in m³/h and **u** is the pipe flow velocity in m/s.

ADCAPURE STAINLESS STEELS AND SPECIAL ALLOYS

The raw stainless steels and special alloys used in ADCAPure products are acquired according to the ASME BPE specifications and comply with the relevant standards.

Internally, these materials are subject to a strict quality control that involves, not only documentation and dimensions verification, but also, spectrographic chemical composition analysis in our facilities.

All materials are internally traceable, by means of quality system procedures.

STAINLESS STEELS AND SPECIAL ALLOYS *		
MATERIAL	STANDARD	CHARACTERISTICS
AISI304 (1.4301)	ASTM A276	Applied only to non-wetted parts.
AISI316L (1.4404)	ASTM A276	Intercrystalline corrosion resistant according to ISO 3651-2 Method A and ASTM A262 Practice E.
AISI316L (1.4435)	ASTM A276	Improved corrosion resistance compared to other CrNi steels due to its increased content of molybdenum.
AISI316Ti (1.4571)	ASTM A276	Intercrystalline corrosion resistant according to ISO 3651-2 Method A and ASTM A262 Practice E.
HASTELLOY® C22 (2.4602)	ASTM B574	Resistance to both oxidizing and non-oxidizing chemicals, protection from corrosion, pitting, crevice attack and stress corrosion cracking.
CF3M (1.4409)	ASTM A351	Ferrite content of less than 2% and low sulphur between 0,005% and 0,017%.

* For other high corrosion resistance steels, please consult factory.

ADCAPURE NON-METALLIC MATERIALS

It is crucial that non-metallic parts are selected to maintain the purity and integrity of the process fluid.

In order to achieve this, they should be compatible with stated process conditions, cleaning solutions and sterilization conditions, defined by the customer.

The following table features an overview of the non-metallic materials applied in the ADCAPure range and their respective approvals.

WETTED NON-METALLIC MATERIALS		
MATERIAL	STANDARD APPROVALS	ON REQUEST
GYLON® (modified PTFE)	FDA 21CFR177.1550 USP Class VI Ch. 87 & 88 USP Ch. 31, 281 & 661 EC1935/2004 EC2023/2006 ADI Free BAM NSF ROHS	3A Sanitary

ADCAPURE SURFACE FINISH

The surface quality, especially the area in contact with the fluid, greatly influences the cleanability of the equipment. All the products from the ADCAPure range are supplied with a standard internal surface finish that allows an efficient cleanability. Apart from the standard conditions, several combinations of roughnesses can be provided both internally and externally, for optimized performance according to customer requirements.

ASME BPE acceptance criteria are applied and achieved by internally controlled procedures, which in term apply visual inspection and carefull roughness measurements.

All metallic parts are produced on the factory with dedicated high end, high precision machines with tool wear control. This allows guaranteed controlled surface conditions directly from the machine.

Explanation of surface finishes

- Fine machining: Obtained with high performance turning and milling machines.
- Mechanical polishing: Polished surface, not necessary with a shiny finish.
- Electropolishing: Satin surface finish typical from electropolishing process.
- Mirror: Shiny "mirror like" finish obtained by mechanical polishing.
- As casted: Standard raw finish of a casted part.
- Satin bead blast: Obtained by sand blasting process, applicable as standard to parts such as pneumatic actuator covers, external surfaces of humidity separators and culinary filters.

SURFACE FINISH OPTIONS

	SF5	–	V

a) In case of discrepancy, the information on the product Information sheet (IS) shall prevail. Other surface finishes and combinations on request.
b) Not applicable to regulating elements. Consult for certified roughness values.
c) The letter should be placed on the "Surface finish" field of the product ordering code. Refer to the product Information sheet (IS). If the product IS does not include a ordering code table, the required surface finish combination should be indicated in writing, in case it defers from the standard one.

ADCAPURE WELDING

The design of equipment which is part of the ADCAPure range is in accordance with the latest specifications of ASME BPE and EHDGE standards and guidelines. The welding procedures are performed by approved welders and according to welding specifications. The process is done manually or via mechanized and orbital machines in strictly controlled environment to avoid any contamination with external particles.

The welding is subject to a detailed visual inspection according to ASME BPE to guarantee its conformity with high demanding industries.

FROM CLEANING TO PACKING

After welding and surface finishing operations, the parts enter a certified clean room, to start the process of cleaning and passivation. A fully automatic ultra-sound cleaning machine allows efficient control of the cleaning procedure in all surfaces.

It is also possible to prepare the product parts for oxygen applications, by performing additional degreasing processes.

The parts follow to an ISO 14644 certified clean room, where they are assembled by trained personnel, according to internal procedures. In the final stage, still inside the clean room, and after all the necessary testing and quality verifications, the products are end capped and vacuum sealed with recyclable plastic film to avoid contamination.

ADCAPURE CERTIFICATES

Our quality system is certified by ISO 9001:2015 and guarantees the control of all the processes involved in the project, manufacturing and supply of our products. Various certificates and declarations can be supplied to attest the conformity of the products.

CERTIFICATES	
TYPE	INFORMATION
CE Conformity declaration	According to directive 2014/68/EU (PED)
ADCAPure specific inspection certificate	Include chemical composition, final testing records, elastomer specifications and approvals, surface finish report.
Hydrostatic test report	According to directive 2014/68/EU (PED)
Pneumatic test report	According to EN12266-1
Degreasing report	Includes treatment information
Ultra-sound cleaning report	Includes treatment information

t – temperature. ρ – density. v – specific volume. Ca – actual specific heat capacity at t. λ – thermal conductivity at t.
Remark: To convert specific volume from cubic decimeters per kilogram (dm³/kg) to cubic meters per kilogram (m³/kg) divide values by 10³.

PROPERTIES OF GASES

Gas	Formula	ρ [kg/m³]	t_f [°C]	t_e [°C]	ρ_e [kg/m³]	v [m³/kg]	Cp [kcal/kg h °C]	λ [kcal/m h °C]

t_f – melting temperature. t_e – boiling temperature.

* From the most common and stable isotope. Values in parentheses refer to the isotope with the longest half-life for those elements having an unstable isotope.

* Reference values. Actual values are strongly dependent on the specific compound and operating medium.

A – good. **B** – satisfactory. **C** – fair. **D** – Doubtful. **E** – Poor. **U** – Unsatisfactory. **1** – EPDM may shrink. **2** – Depending on compound.

Remarks: This information is intended only as a guideline. Detailed chemical compatibility lists should be consulted.

Whenever possible the fluid compatibility of the O-ring compound should be rated "A". For a static seal application a rating "B" is usually acceptable, but it should be tested.

Where a "B" rated compound must be used, do not expect to re-use it after disassembly. It may have swollen enough that it cannot be reassembled.

When a compound rated "C" is to be tried, be sure it is first tested under the full range of operating conditions.

Common trade names: NBR - Perbunan N®, Buna N®, FPM - Viton®, Fluorel®, FFKM - Kalrez®, Chemraz®, Parafluor®.
